cardiac surgeon**

**Affiliation:** *Deutsches Herzzentrum, Berlin, Germany*

### COMMENT

In cases of Kawasaki Disease with concomitant coronary stenosis, CABG is often performed. CABG with stent implantation into the lumen of the aneurysm might be considered, however it remains controversial. Multi Slice Computed Tomography should be performed for further observation rather than invasive coronarography.

**EXPERT: Prof. Janusz Skalski, MD PhD,  
pediatric cardiac surgeon**

**Affiliation:** *Department of Pediatric Cardiac Surgery, Jagiellonian  
University Medical College, Krakow*

### COMMENT

Surgical approach is controversial in this patient, however if myocardial ischemia appears, revascularization may be needed.

## Medical Conclusion

"Development of the European Network in Orphan Cardiovascular Diseases"  
„Rozszerzenie Europejskiej Sieci Współpracy ds Sierocych Chorób Kardiologicznych”

---

### CONCLUSION

The patient was currently qualified for close follow-up. Coronary arteries should be evaluated with the use of MSCT. If symptoms of ischemia occur CABG is recommended treatment option.
